Activity-Based Learning (ABL) Consolidated Report

Course: Web Development | Subject Code: CSE-WD 2026

Student Name	Thanush Lanke	**Registration No**	26000176
Branch & Sec	Computer Science & Engineering	**Academic Term**	2026

Selected Case Studies Overview

1. Online Food Ordering Website

A restaurant menu dashboard featuring food categories, descriptions, price tags, and interactive hover-enabled order buttons styled with a warm aesthetic theme.

2. Fitness Center & Gym Website

An engaging gym landing page displaying structured workout modules, membership pricing cards, and action call-to-buttons built with modern CSS Flexbox grids.

3. User Registration & Authentication Interface

A clean, responsive user login and registration portal featuring semantic HTML5 form controls, input validations, and custom styled focus states.

GitHub Repository Reference

Repository Name: WD-Activity-Based-Learning
Contents: HTML/CSS project files, consolidated report, and code documentation.

Case Study 1 & 2: Source Code Implementation

1. Online Food Ordering Snippet (food_ordering.html & food_ordering.css)

```
<div class="menu"> <div class="item"> <h3>Cheese Pizza</h3> <p>Loaded with extra mozz
arella cheese.</p> <div class="price">Rs. 299</div> <button>Order Now</button> </div> </div>
/* food_ordering.css */ body { font-family: Arial, sans-serif; background: #fff8f0; } .menu
{ display: flex; gap: 20px; justify-content: center; } .item { background: white; border: 1p
x solid #ddd; padding: 15px; border-radius: 8px; } button { background: #d22727; color: whit
e; border: none; padding: 10px 15px; }
```

2. Fitness Center & Gym Snippet (gym.html & gym.css)

```
<div class="program-card"> <h3>Strength Training</h3> <p>Build power with professiona
l weight guidance.</p> <span class="tag">Popular</span> </div> /* gym.css */ .program-card {
background: #111827; color: #f9fafb; padding: 20px; border-radius: 8px; } .tag { background:
#2563eb; color: #ffffff; padding: 4px 8px; font-size: 12px; } [ Browser renderings for Food
Ordering and Gym Web Interfaces verified ]
```

Case Study 3 & Conclusion

3. User Registration Snippet (login.html & login.css)

```
<form class="auth-form"> <label>Username</label> <input type="text" placeholder="Ente
r username" required> <label>Password</label> <input type="password" placeholder="Enter pass
word" required> <button type="submit">Login</button> </form> /* login.css */ .auth-form { ma
x-width: 360px; margin: 0 auto; display: flex; flex-direction: column; gap: 12px; } input {
padding: 10px; border: 1px solid #ccc; border-radius: 4px; } button { background: #10b981; c
olor: white; font-weight: bold; padding: 10px; }
```

Learning Outcomes & Summary

Through this Activity-Based Learning assignment, core concepts of HTML5 semantic structure, external CSS box modeling, flexible layout arrangements, and web design typography were practicalized. All project files have been successfully structured, tested, and published on GitHub.
